                                                                                                                                                                                                                                                                                                                                                                                                                 corresponding to the overlapping clone, as we submit sequences with rhis sequence was finished above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= one plasmid subclone or more than one Mil sequencing problems, such assembly was confirmed by restriction digest. The following in the feature table with their source databases: Em:, EMBL; Sw:, database can be found at http://www.sannar.ac.u//nrointer/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silentar/silenta

On Aug 31, 2001 this sequence version replaced gi:14161146.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission

                                                                                                                                                        A novel DNA segment (AAT34162) has an isolated sequence region defined as the Fas gene promoter region. This includes a number is also included. The DNA segment was isolated from a human pertide corresponding to nt 23-346. It can be combined with a structural transcription factor binding sites. A coding sequence for placental DNA library using a 32P-labeled segment from a human gentide corresponding to nt 23-346. It can be combined with a structural transcription factor binding sites. The promoter region can be too find the gene is under the transcriptional control of the a means of treating Fas mediated apoptosis disorders such as malionancies and antrimmune diseases

                                                                                                                                                                                                                                                                     Olek A,
                            The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and including eyeration, arteriosclerosis, anaemia, cancer, acute myeloid eyeration, arteriosclerosis, anaemia, neurofibromatosis, macular degeneration, arteriosclerosis, anaemia, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel alseases. The present sequence is a gene of the invention.
                                                                                                                                                                                              Nucleic acid comprising fragment of chemically modified gene, useful for diagnosis and treatment of diseases associated with abnormal

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders,

AA AAC97991 to AAC98763 encode the human colon cancer associated proteins, AA AAC97991 to AAC98763 encode the human colon cancer antigens, given in AAB53234 to AAB54006. The CC called human colon cancer antigens can have cytostatic, cardioactive, muscular; CC neuroprotective, immunomodulatory, gynaecological, gastrointestinal, cc can be used in gene therapy. The colon cancer antigen polynucleotides, and be used in disposits of the proteins are useful for the prevention, cc crosses and antibodies to the proteins are useful for the prevention, cc chromosome identification, and as hybridisation probes. The proteins cc chromosome identification, and as hybridisation probes. The proteins cc chromosome identification, and as hybridisation probes. The proteins cc gystem disorders, muscular disorders, reproductive disorders, immune cc gastrointestinal disorders, wounds, renal disorders, infectious gystem disorders, and cardiovascular disorders. AAC98772 and CAAB54007 represent sequences used in the exemplification of the present constants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    γ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁

                                                                                                                                                                                                                                                                                                                                                                                                         226 gcggggggggggagagagcctgcagccttcagaacagatat 266
                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes a novel p53-binding region of a human CD95 receptor DNA molecule. The p53-binding region, or a vector containing it, can be used to screen for apoptosis-modulating substances potentially useful for cancer chemotherapy. This sequence represents a fragment of the human CD95 receptor intron I which contains a p53 binding region described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             106 aagetttagggtegetggaggggaeeeeggttggagaggaggageggaaeteetggaeaa 165

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             mRNA was obtd. from human lymphocytes and PCR was used to make cDNA specific for Fas-delta-TM (i.e. Fas lacking the transmembrane region) mRNA. The PCR product was ligated into pBluescript and the recombinant plasmid was used to transfect E. coli DH5-alpha cells. Insert sequence of pBluescript-Fas-delta-TM is given in AAQ93879.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 3; Fig.3-1 to 3-4; 38pp; English.

CC (see AAW98070). The invention provides a method for inhibiting a CC (see AAW98070). The invention provides a method for inhibiting a CC proinflammatory response in a cell mixture by administering an CC immunosuppressive agent which inhibits the proinflammatory activity (CC immunosuppressive agent which inhibits the proinflammatory activity (CC imflammatory activity). In some embodiments, FasL is coadministered (CC in vivo. Suitable immunosuppressive agent, and the cell mixture comprises (CC in vivo. Suitable immunosuppressive agents include antisense (CC in vivo. Suitable immunosuppressive agents include antisense (CC in vivo. Suitable immunosuppressive agents include antisense (CC enceptors, ribozymes that inhibit the endogenous expression of (CC receptors, ribozymes that inhibit the endogenous expression of (CC endogenous expression of transforming growth factor (TGF)-beta, cc and polynucleotides coding for an immunosuppressive agent such as (CC endogenous expression of transforming growth factor (TGF)-beta, compared the method can be used for treating diseases associated (CC with an undesired FasL-mediated proinflammatory response, e.g. (CC systemic lupus erythematosus, rheumatoid arthritis and psoriasis. (CC condulate FasL stimulation of a proinflammatory response.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁

The cDNA was ligated to BstXI-cut vector pCEV4 via BstXI linkers. The KT3 cDNA library was used to transfect monkey COS-Ab. The cells were then suspended in buffer containing murine anti-ras antibodies. The Fas-expressing cells adhered with goat anti-mouse Extrachromosomal DNA was prepared from adhered to the plates. transform E.coli VM100 cells. A 520bg XhoI-BamHI fragment from a longest cDNA clone (pF3) was used to screen the KT-3 cDNA library. The to a 335 amino acid pre-protein and a 319 amino acid mature protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (NISB ) JAPAN TOBACCO INC
                                                                                                                                                                                                                                                                                                                 This sequence represents the coding sequence for the human Fas antigen is contained within the plasmid pCEV4/hFas. The soluble Fas antigen is contained within the plasmid pCEV4/hFas. The kit is for the representation of the immunoassay kit of the invention. The kit is for the included in the immunoassay kit of the invention immobilised anti-soluble Fas antigen encoded included in the fas antigen and contains an immobilised anti-soluble Fas antigen encoded assay of soluble Fas antigen and as the standard soluble Fas antigen encoded in the sequence. The assay is simple and has high accuracy, high sequence is capable of assaying a number of different specimens by this sequence is capable of assaying a number of different specimens sensitivity, and the immunoassay is used on biological samples (such as serum) and is useful for diagnosis of autoimmine diseases such as rheumatoid arthritis or systemic lupus erythematosus (SLE).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Immunoassay method for soluble Fas antigen in body fluids - for diagnosis of auto:immune diseases such as rheumatoid arthritis and

The present sequence represents a ras cuma sequence used in the method of the invention. The method is concerned with reducing TRX) method of the invention. The method is concerned with reducing TRX) comparison to the invention. The method is concerned with reducing TRX) comparison to the invention of activated Fas-Expressing comparison to fan agent (e.g. a cells in an immune cell toppulation which also comparison to the serior of activated CC (rash) expressing activated CD4+ cells. In the mount of an agent the comparison of activated CC (ratheristic composition for the serior population protein) which would interfer with the serior of activated CC (ratheristic compositions) and Fasi. Therefore, the method is cuseful for composition of activated CC (ratheristic composition for the serior population of activated CC (ratheristic compositions) and Fasi. The reduce deplation of activated CC (ratheristic compositions) and fasi. The reduce deplation of the composition of comp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ras protein; CD8+ T-lymphocyte killer cell; TK; Fas-ligand; FasL; Fas protein; CD8+ T-lymphocyte; human immunodeficiency virus; HIV; CD4+ cell; apoptosis; lymphocyte; human immunodeficiency virus; SIV; cytotoxic T lymphocyte; CTL; sinian immunodeficiency virus; SIV; cytotoxic T

It carries a mouse dystrophin virus that supplies the sequences needed for a productive viral adenovirus is produced that disabled packaging function. Recombinant transgene into the host cells and the ability to stably integrate the to transfer the dystrophin gene for use in muscular dystrophy gene therapy.

It carries a CFTW gene under the control of a chimeric CMV enhancer/chicken beta-actin promoter. It is used with a helper virus that supplies the gequences needed for a productive viral infection but which has disabled packaging function. It is used with a helper virus that supplies to haracterized by high titer a productive viral infection but which has disabled packaging function. It is used with a host cell and the ability to stably integrate the ransgene delivery to host cells and the ability to stably integrate the transgene into the host cell chromosome. Such a vector can be used to transfer the CFTR gene for use in cystic fibrosis gene therapy.
